

Advanced Wellness Clinic

*Now offering Anti-Ageing Treatments for men and women,
in addition to our hair regrowth programs.*

*Offering a medically supervised, holistic
approach to wellness, featuring cutting-edge
technology that delivers results.*

A Ground-breaking Medically Supervised Anti-Ageing Procedure. Cellular Autologous Regenerative Treatment; The New Age of Facial Regeneration.

Exclusive to Advanced Wellness Clinic

The most involved process of facial aging is the loss of 'volume', which results in ageing of the skin. Cellular Autologous Regenerative (AR) treatment is a MEDICAL procedure. This ground-breaking treatment is a tissue graft procedure using autologous (self) Mesenchymal Adipose Derived Stem Cells (ADSCs) and the Stromal Vascular Fraction (SVF) for tissue regeneration and volume restoration.

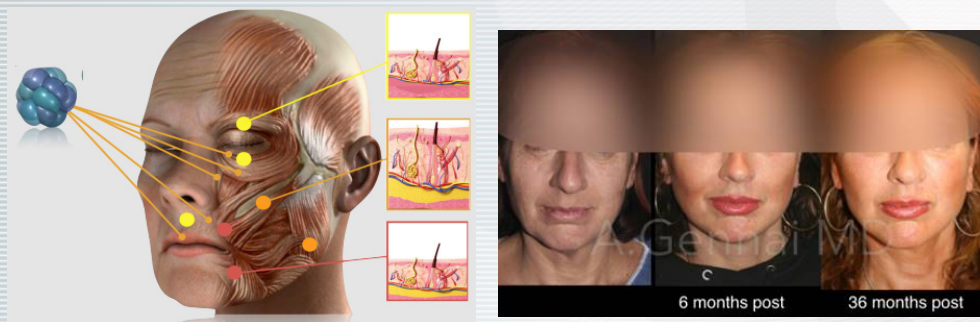

AR treatment is not a temporary filler for the face but a regenerative treatment enhancing facial volume, skin tone and firmness.

Immediate facial volume with tissue regeneration seen after 1-2 months.

Treatment Costs:

≈ R.R.P: \$4,495 (one treatment)

≈ R.R.P: \$8,795 (two treatments)

*Contraindications Disclaimer: Note that for all treatments, individual results may vary. All invasive procedures carry risks which need to be discussed with your doctor. It is always recommended to seek a second opinion from a qualified health practitioner. A consultation will be carried out by a Cosmetic Physician/Doctor before the administration of these treatments; the treatment will be performed by a qualified Cosmetic Physician/Doctor using TGA Approved Medical Device, ARTG 316290.

Anti-Ageing PRP Autologous Blood Cell Skin Treatment

Otherwise known as a 'Vampire Facial' this bespoke treatment programme for both men and women is a skin revitalisation Platelet Rich Plasma (PRP) treatment, a powerful cocktail of protein (growth factors and cytokines) that stimulate cell regeneration using a patient's own cell biology.

The procedure uses the Regen Lab System, a standardized platform which yields a concentration of growth factors of platelets from your blood which are injected back into the skin using a unique micro-needling technology designed for delicate zones. Because platelets are known to contain a significant amount of growth factors, this treatment program promotes tissue regeneration, increases collagen production and elastin resulting in facial rejuvenation.

Treatment:

- Medically supervised, four PRP Treatments-reviewed after 4 months per session using Swiss manufactured Regen BCT system and Nanosoft microneedles for intradermal injections.
- Our Dr along with your PRP nurse will advise you of your treatment regime after assessing your medical notes.
- Bio-stimulation of cells using Low Level LASER Therapy to improve wrinkles and skin laxity through its regenerative effects including increasing collagen production, increasing proliferation of fibroblasts as well as enhancing microcirculation and vascular perfusion of the skin.
- The safe and effective medically supervised treatment that has now replaced fillers.

≈ R.R.P: \$2,695 Face/Décolletage

*Contraindications Disclaimer: Note that for all treatments, individual results may vary. All invasive procedures carry risks which need to be discussed with your doctor. It is always recommended to also seek a second opinion from a qualified health practitioner. A consultation will be carried out by a doctor before the administration of these treatments; however, the treatment may be performed by a suitably qualified and trained registered nurse. The doctor's consultation may take place via video consulting or face to face. TGA approved medical device, ARTG 315062.

Anti Wrinkle Injections

What are anti-wrinkle injections?

Botox are highly purified toxins that can temporarily erase or reduce horizontal forehead lines, vertical frown lines, and crow's-feet. The injections slow muscles that contract hundreds of times a day, eventually reducing the lines in the skin. In addition to relaxing frown lines in between the eyebrows, Botox can also lift the corners of the mouth that sag with age, smooth out the "pincushion" look in some chins, soften smoker's lines around the mouth.

How does the treatment work?

Anti-wrinkle treatments work by relaxing facial muscles that cause dynamic lines, such as around the eyes when you smile or between the eyebrows upon frowning. Repeated use of anti-wrinkle injections at prescribed intervals can have a cumulative effect that prevents the dynamic lines from becoming deeper and present even without movement.

What does the treatment involve?

Anti-wrinkle treatments are a series of quick, simple injections into specific facial muscles, using very fine needles. Treatment takes only a few minutes and typically any pain is minimal and brief, so no numbing agent is required. It is important to follow the aftercare instructions your clinician gives you and return for a review if recommended.

When will I see results?

You may notice the results in just 2-3 days; however, the peak effect is around 2 weeks after treatment. If you decide not to continue your treatment, your muscle activity will gradually return, and your wrinkles will slowly reappear. This usually occurs anytime between 12-16 weeks after treatment. Repeating the treatment at this time will prolong the result.

Are there any risks or contra indications?

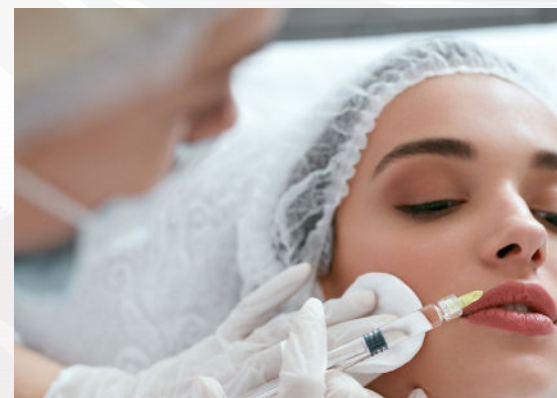

As with most cosmetic-medical treatments, there are some risks involved which will be discussed with you on consult. These can include slight irritation at the injection sites, mild pain, bruising, swelling, itching or redness. Muscle weakness such as drooping eyelids or brows are also possible. Anti-wrinkle injections are not suitable for pregnant or breast-feeding women and for certain health conditions, which is why a thorough consult is required prior to treatment.

*Contraindications Disclaimer: Note that for all treatments, individual results may vary. All invasive procedures carry risks which need to be discussed with your doctor. It is always recommended to also seek a second opinion from a qualified health practitioner. A consultation will be carried out by a doctor before the administration of these treatments; however, the treatment may be performed by a suitably qualified and trained registered nurse. The doctor's consultation may take place via video consulting or face to face.

Anti Wrinkle Injection Treatment Costs

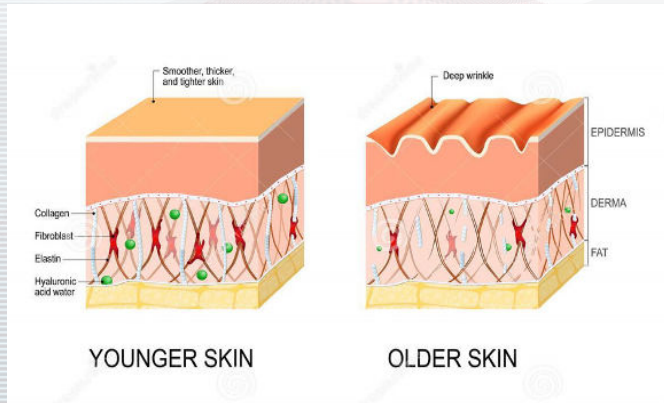

Standard areas of facial treatment are frown lines, forehead and crow's feet (outer canthus of the eyes), however several areas of the lower face are injected with minimal units. Higher doses may be required in some male faces or if you desire a very strong effect.

≈ R.R.P: \$675 per treatment (50 units Botox)

*Contraindications Disclaimer: Note that for all treatments, individual results may vary. All invasive procedures carry risks which need to be discussed with your doctor. It is always recommended to also seek a second opinion from a qualified health practitioner. A consultation will be carried out by a doctor before the administration of these treatments; however, the treatment may be performed by a suitably qualified and trained registered nurse. The doctor's consultation may take place via video consulting or face to face.

Modern Life Ageing

New Cellular Treatment Factor

NCTF Boost 135 HA For Radiant, Even and Hydrated Skin that Targets the causes of Skin ageing & Corrects the signs of Ageing.

NCTF (New Cellular Treatment Factor) is a unique anti-aging, poly-revitalizing complex that nourishes the skin by providing the ingredients that it needs to thrive. It creates the optimal environment for fibroblasts, which are responsible for the production of collagen, elastin and hyaluronic acid. Advanced delivery of NCTF to the transdermal layer of the skin by chrono diffusion results in improved skin texture, even complexion, smoother skin, hydration, radiance, tonicity and homogeneity.

Three sessions are recommended to improve skin quality. Additional sessions can be used to maintain the result.

≈ R.R.P: 3 x treatments (fortnightly) \$1,050, including skin perfusion mask after each treatment.

Advanced Wellness Constitutional Herbal Medicine Integrative Complementary Medicine to support Cellular Ageing

At a biological level, the cause of ageing is the result of an accumulation of molecular and cellular damage over time. The outcome of this intrinsic stress overtime is clearly visible in the skin as ageing but is also evident in other internal parts of the body. Basic genetic expression is understood to be a determinant as to how an organism adapts to internal stress.

Advanced Wellness provides a holistic consultation to provide supportive therapeutic adaptogens from botanical medicine uniquely formulated for your constitution based on known genetic expression. The Advanced Wellness Anti-Ageing botanical medicines are certified organic and consciously sourced to provide the Phyto therapeutics needed to reduce oxidative stress and the effects on the biological ageing process.

Advanced Anti-Ageing Complementary Medicine ≈ R.R.P: \$600

Including consultation and Practitioner Only medications for 3 months.

Advanced Anti-Ageing Constitutional Adaptogens are based on genetic eye colour which is determined by a variation of an individual's genetic expression. The Advanced Constitutional range of herbal medicine provides therapeutics designed to support cellular and anti-aging. Combined with any of the treatments shown in this brochure, the Advanced Anti-Ageing range can provide significant regenerative benefits for hair and skin. Organically sourced herbs such as Schisandra, Withania Somnifera, Eleutherococcus and Centella Asiatica known for their adaptogen and nutritive support combined with understanding your body's constitutional type can be effective in providing the needed support with the ageing process.

Outside of Victoria natopathic telehealth consultations are available.
